

# WORKSHOP

## 10 KEY THINGS FOR A SUCCESSFUL SMART METER ROLL-OUT

15 March 2018, Brussels

Almost 40%

● with smart meter  
● without smart meter

of the 281 million  
electricity customers

in EU 28+2

had a smart meter  
at the end of 2017

● with smart meter  
● without smart meter

This share is set to  
increase to more than **75%**  
over the next **5** years

**However, is the installation of smart meters enough to realise the expected benefits for utilities, consumers and society at large?**

In this workshop, we will look at smart metering beyond the numbers:

How does a consumer benefit from a smart meter?

How do utilities actually use smart meters for grid management?

How do smart meters enable a smart energy future for the society at large?

We will look at previous and current roll-outs to see what we can learn from their experiences, we will talk to consumers, utilities representatives and regulators to find out their perspective and together we will elaborate 10 key things that make a smart meter roll-out successful.

**You want to be a part of this?  
Join us on the 15th of March in Brussels.**
